### AFTERMARKET KIT

STARNUT - TRAVEL CHARGE SPACER  
REMOTE CONTROL - LOCKS - SET

Weights taken at 165mm steerer length  
(+30g for carbon, +60g for alloy, no remote  
included). Product features may change  
during production timeline.

AXLE  
15mm QR  
~30g

## REMOTE CONTROL OPTION

Completely redesigned from the top to bottom, the new Remote Control is now compatible with the most popular cockpit layouts from Shimano or SRAM, and can be positioned on both sides of the handlebar.

## AER TECHNOLOGY

Air that makes you fly. The AER cartridge performs better than any other system on the market. Countless reviews and tests can prove that this is the way to go! The low pressure required keeps the seals sliding smoothly on the surface with no friction at all. The negative spring offers plushness you would expect from a coil system right from the beginning of the stroke.

## AIR PRELOAD, NEGATIVE SPRING

The only XC fork with Compression adjust - a wider range of control on the ride, especially in the rough or in the full braking situations avoiding the stanchions to sink in the lowers and keeping the riding position safe and steering precise.

## NEW CUSTOM SINGLE SEAL SYSTEM

Mazocchi's new proprietary, custom low-friction, single seal system sets the new standard for performance XC.
